

## Java Engineer (Mid-Level), LA, California / Remote, Full-Time

Ad.net is looking for a Java Engineer who is self-sufficient and disciplined to participate in our new endeavor in the contextual ad space. This individual will also play a large role in supporting our highly profitable core business. We are looking for someone who is passionate about making an impact in the industry through their enjoyment of solving complex technical and business problems.

### Responsibilities

- Help maintain and improve Ad.net's core revenue generating ad-serving technology
- Ability to be self-sufficient in project start-up and completion
- Perform code reviews, sprint demos, and retrospectives
- Work with the product team and key stakeholders to build the best possible product
- Focus on leading design and improvements of Ad.net's Keyword Intent Marketplace built for high availability and high performance
- Work on an advertising platform that integrates multiple 3rd party source and demand partners
- Work with Ad.net's big data engineering team to integrate data onto our big data infrastructure

### Experience & Skills

- 3+ years hands-on software engineering – solving and scaling problems horizontally
- Strong, disciplined skills in Java and its frameworks like Spring and relational database technologies
- Ability to operate in an agile, entrepreneurial start-up environment
- You must be motivated, driven, and passionate about programming and technology with an emphasis on practical problem solving
- Working knowledge of HTML and modern JavaScript frameworks
- BS degree in Computer Science or equivalent experience

### Bonus Experience & Skills

- Experience with high throughput, low latency web server-based products
- Experience with distributed (cross data centers) web applications (large scale distributed data stores, data replications etc.)
- Experience in CI/CD and DevOps skills in Kubernetes, Docker, Cloud Computing
- Experience in Big data infrastructure (Kafka, Spark, Hive, Hadoop, ClickHouse)

- Experience in digital advertising and/or marketing
- Domain knowledge of marketing channels like SEM, Facebook, SEO, etc.
